MATE 4145 assignment 0

The purpose of this homework is to learn how to upload files in the proper format. For the first problem, you will upload a pdf file, which will be a photographic copy of your solution; for this you can use software like *Camscanner*. The solution may be written by hand, not typed. It is important that the contrast of the file be enough to make it legible. Image files using any other format than pdf (such as jpeg, etc …) are not accepted.

For the second problem, find out how to use the command `diary` in Octave, and hand in a diary file of the commands you used.

This homework does not count for points. It is however essential that, on homework and exams, the files you send conform to the appropriate format, in order to get credit.

1. Exercises 9, 10, 14 of §1.4.

2. Record, in a diary file, the result of a session in Octave where you illustrate some of the topics explained in the first two tutorials of the series "Octave for absolute beginners", linked to on the Moodle page, and upload the diary file. First, enter in Octave the command `help diary`.
